

GoFileRoom REST API — Cheat Sheet & Implementation Ideas

Thomson Reuters GoFileRoom | June 2026 | **Base URL:** `https://m.services.gofileroom.com/` | **Rate Limit:** 10,000 req/hr | **Auth:** API Key + OAuth2

Quick Reference

1. Call TR: 1-800-968-0600 → request API key
 2. Register: `developerportal.thomsonreuters.com`
 3. Read spec: `developerportal.thomsonreuters.com/gofileroom-firmflow-api`
 4. Test: Load spec into Postman → authenticate → run a document search
 5. Build: Pick one implementation below and start there

Authentication

```
GET https://m.services.gofileroom.com/api/documents/search
Authorization: Bearer YOUR_API_KEY
Content-Type: application/json
```

What the API Can Do

Documents

Action	What It Does
Search documents	Query by client, date range, doc type, any index field
Retrieve document	Download the actual file by Document ID
Upload / ingest document	Push a file into GoFileRoom with index metadata
Update document metadata	Change index fields on an existing document
Delete document	Remove a document
Archive document	Move to archive status
Get document history	Audit trail — who viewed / edited / downloaded

Document Search & Indexing

Action	What It Does
Search by index fields	Client name, SSN/EIN, tax year, doc type, etc.
Full-text search	Search inside document contents (indexed docs)
Get index field definitions	See what fields your firm has configured
Get drawer/folder structure	Navigate the GoFileRoom file structure

Users & Groups

Action	What It Does
List all users	Get every user in your firm
Create user	Add a new GoFileRoom user programmatically
Update user	Change roles, permissions, group membership
Deactivate user	Disable access without deleting
List / create / update groups	Manage team structure

FirmFlow (Workflow)

Action	What It Does
Get workflow folders	List all engagement/workflow folders
Create workflow folder	Start a new engagement workflow
Update folder	Change status, due dates, assignments
Get / assign / complete tasks	See, assign, and sign off workflow steps
Get / create deliverables	List and add items to track
Get workflow status	Check overall engagement progress

Reporting & Organization

Action	What It Does
Get organization info	Firm name, structure, drawer list
Run search reports	Pull structured data across multiple clients
Export to BI tools	Feed data into dashboards and analytics

10 Implementation Ideas

1. AI Document Assistant Medium

User asks a question about a client → API searches GoFileRoom → retrieves matching docs → AI (Claude, GPT, etc.) reads and answers in plain English.

Stack: GoFileRoom API → Python → Claude API

2. Client Onboarding Automation Low-Medium

New client added to your system → automatically creates GoFileRoom drawer, folder structure, and FirmFlow workflow assigned to the right team.

Stack: Practice CS / CRM → Zapier or Python → GoFileRoom API

3. Engagement Status Dashboard Low-Medium

Scheduled job pulls all FirmFlow workflow statuses hourly → writes to a database → Power BI / Looker Studio dashboard shows everything open, overdue, and assigned.

Stack: GoFileRoom API → Python → SQL DB or Google Sheets → Dashboard

4. Automated Document Intake Medium-High

Client emails a PDF → AI classifies it (W-2, 1099, bank statement, etc.) → auto-uploads to GoFileRoom under the correct client with index fields pre-filled.

Stack: Email API → Python + AI classifier → GoFileRoom API

5. Deadline & Due Date Alerts Low ← **Easiest to Build**

Daily job queries FirmFlow for tasks due in the next 3 days or already overdue → fires Slack message or email alert. Can also auto-escalate by reassigning via the API.

Stack: GoFileRoom API → Python → Slack API or email

6. AI Tax Organizer Review Medium

Checks what documents are in GoFileRoom for a client + tax year → compares against a checklist → sends the client an automated reminder listing exactly what's missing.

Stack: GoFileRoom API → Python + Claude → email/SMS to client

7. Document Retention & Compliance Cleanup Medium

Searches for documents older than your retention policy (e.g. 7 years) → generates an approval report → after human sign-off, archives or deletes in bulk → logs everything.

Stack: GoFileRoom API → Python → approval email → bulk delete via API

8. Cross-Client Search & Reporting Medium-High

Answer firm-wide questions: "Which clients are missing 2024 tax docs?" / "Which staff member has the most open tasks?" AI queries across all clients and summarizes.

Stack: GoFileRoom API → Python → Claude or GPT → chat UI

9. Reconciliation Tool Integration Low ← **Best ROI for Your Firm**

When a bank rec is completed in your tool, automatically upload the reconciliation report to GoFileRoom under the right client with doc type, period, and index fields pre-filled. No manual filing ever again.

Stack: reconciltool → GoFileRoom API (one upload call)

10. Power BI Analytics Feed Medium

Nightly job pulls GoFileRoom + FirmFlow data → writes to SQL Server → Power BI dashboards show document volume, workflow throughput, and staff utilization firm-wide.

Stack: GoFileRoom API → Python → SQL Server → Power BI

Start here: Idea #5 (Due Date Alerts) is the easiest build — one Python script, one day of work.
Best ROI: Idea #9 (Reconciliation Tool Integration) — directly connects your existing tool to GoFileRoom with a single API call per completed rec.
